At the conclusion of this activity, participants should be able to:

1. Implement Parent-Child Interaction Therapy (PCIT) in a clinical setting with children and families according to the established protocol.

2. Describe the main skills and concepts comprising the 2 treatment phases, the child directed interaction and the parent directed interaction.

3. Administer, score, and interpret the assessment measures associated with PCIT.

Due to a generous donation to Judge Baker Children’s Center, a discounted rate of $3500/clinician is currently available. However, space is limited!

Dr. Rhea Chase and Dr. Joshua Masse disclose that they serve as consultants for PCIT International, Inc.

Interested therapists should email rchase@jbcc.harvard.edu for a brief application and with any questions.
